DRINKING WATER SYSTEM STATUS REPORT

I, the undersigned property owner, in making an application for a building permit involving a single-family residence acknowledge that this notice is being signed, notarized and recorded in compliance with Skagit County Code Section (S. C. C.) 12.48.270. The alternative drinking water source is not a drilled well and requires filtration and disinfection treatment to be potable.

1. I agree to record this notice with the Skagit County Auditor's Office for the purpose of it being made a part of the record of title.
2. I understand that this notice will appear on any title search or record search. We have no objection nor will we make claims against Skagit County as a consequence of this recording.
3. The primary drinking water source for this single family residence is a shallow dug well. The dug well is 12 feet deep with a 9 foot surface seal instead of an 18 foot seal. Construction was completed November 12, 2010. The Health Department requires both continuous filtration and disinfection to ensure the source is consistent and potable. The owner chose the following water treatment equipment to serve the whole house: 5 micron sediment filter with a 10 micron carbon block filter followed by an ultraviolet disinfection unit. Poor water clarity (turbidity) may indicate that pathogens may be present at times in the drinking water. The Health Officer recommends that property owners exercise caution in the use of this drinking water system by:
 - a. conserving drinking water use where possible by installing low water use landscaping and fixtures,
 - b. having spare ultraviolet light bulbs, filters and maintaining a operation and maintenance log,
 - c. testing for turbidity during times of poor water clarity,
 - d. testing for bacteria on a quarterly basis and
 - e. providing appropriate maintenance to the filtration and disinfection units as directed by the manufacturer.
 - f. Note: The owner has a drilled well nearby the dug well that was completed October 28, 2010. It is 244 feet deep and produces poorly.
4. **Properties with water systems with filed status reports will not be used as justification for the creation of new lots and can not be further subdivided.**
5. Specific drinking water system information for this lot may be on file at the Skagit County Public Health Department.
