Consultants, LLC

March 11, 2019

Project No. 01127-02

Mr. Stephen Taylor  
McLucas & Associates, Inc.  
PO Box 5352  
Lacey, Washington 98509

**Subject: Lake Erie Pit Well Reconnaissance**

Dear Steve:

Northwest Groundwater Consultants, LLC (NWGC) has prepared the following letter present the findings of the recent well reconnaissance at the Lake Erie Pit in Skagit County, Washington. The scope of work included measuring groundwater levels in three wells located at and near the subject property. Groundwater levels were used to develop groundwater contours and determine the groundwater flow direction. This scope was developed in agreement with Mr. John Cooper, LG, LHg, Skagit County Planning and Development Service during a telephone conversation on February 21, 2019.

**Field Activities**

Groundwater levels were measured in three wells on March 7, 2019. These wells included the following:

- Well BJF-103 located in south portion of the Lake Erie Pit property
- Wooding well located in the shop area north of Rosario Road
- Reisner well locate east of the Lake Erie Pit property at 13495 ROSARIO ROAD (Parcel No. P19127)

Groundwater levels were measured in BJF-103 using a Solinst® water level meter and an Eno Scientific Well Sounder 2010 Pro. Groundwater levels in the Wooding and Reisner wells were measured using the Eno Scientific Well Sounder 2010 Pro. Pumps installed in the Wooding and Reisner wells were not operating at the time the measurements were taken. The location and elevation of each well was established using a Topcon GRS-1 GPS. Table 1 presents location and water level measurements.

**Groundwater Flow Direction**

Groundwater elevations were calculated and plotted for each of the three wells. Using a 3-point solution, groundwater flow direction was determined to be approximately North 9° East (see Figure 1). This calculated flow direction is consistent with the groundwater flow

Northwest Groundwater  
Consultants, LLC

direction presented in the Hydrogeologic Site Assessment Report prepared by Maul Foster & Alongi, Inc. (MFA) and dated September 28, 2016 and the Observation Well Installation letter prepared by MFA and dated September 28, 2017. If you have any questions, or wish to discuss any items further, please do not hesitate to contact me at (208) 755-1094.

Sincerely,

  
  
3/11/2019  

Thomas F. Mullen, LHG  
Principal Hydrogeologist
