

Exhibit A-25: Image of intersection of Old  
Highway 99, Prairie Rd, Bow Hill Rd

### Old Highway 99/Prairie Road/Bow Hill Road Intersection

Per 2020 Grip Road Mine Traffic Impact Analysis:

- WSDOT crash data shows 12 intersection-related crashes here 2015-2020
- Equals 0.96 crash rate (crashes per million entering vehicles per period)
- Institute of Transportation Engineers (ITE) recommends that any intersection with more than one **(1)** crash per million entering vehicles may be worthy of additional analysis.
- Crash severity table shows that one-half of total were injury-related.

Five-year crash rate was just 0.04 less than ITE threshold of one (1) crash per million entering vehicles. Given how close actual rate was to threshold, common sense would suggest recommended additional analysis should have been done.
