SEATTLE TO BUILD STATE HATCHERY ON UPPER RIVER

C.F. Uhden, engineer in charge of the Seattle power project on the upper Skagit, has notified the state fish commissioner that the city will construct a state fish hatchery on the Skagit. The city is required to build fishways over all its power dams to permit salmon to reach spawning grounds or build a hatchery. As there will be five large power dams in the completed unity the city has decided to build the hatchery. To determine the proper site for the new hatchery, which will be built by the city and operated by the state, state hatchery officials have this week made an extensive survey of the upper river. It is believed that a site near the first dam will be selected. The hatchery will cost between \$10,000 and \$15,000, and will be the thirty-ninth in the state, which gives this state the largest number of any state in the United States.
