# DeBay Slough Feasibility Study 

## OVERVIEW

Skagit County owns and maintains DeBay Isle Road which leads to Washington Department of Fish and Wildlife property. The road has a culvert that has been identified as a barrier to fish passage. DeBay Slough, a tributary to the Skagit River, is a relic oxbow of the Skagit River. The property is surrounded by public and private lands.

This phase of the project (County project WA402242) will complete a feasibility for the site. Funding has been awarded from the Washington State Salmon Recovery Funding Board (PRISM \#20-1367).

For more background or funding information see the Project Website.

## UPDATE

- Background Data Collection -
- Winter wildlife monitoring completed Wednesday, January $\mathbf{2 6}^{\text {th }}$ and Thursday, February 17th
- Spring wildlife monitoring completed Tuesday, May $17^{\text {th }}$.
- Bathymetry and Topographical survey completed
- Water surface elevation gages reinstalled and collecting data.
- Water quality data compiled from past County efforts.
- Design -
- Existing conditions hydraulic model development
- Site assessment summary memo preparation on-going as data collection tasks are completed
- Communication and Stakeholder Outreach -
- The Project Website website is up.
- The first virtual workshop was held:
- Wednesday, January $\mathbf{2 6}^{\text {th }}$

## UPCOMING

- Complete modeling of existing conditions and selection of modelled flows
- Second wildlife monitoring scheduled for June $8{ }^{\text {th }}$.
- Second virtual workshop in August
- Development of potential actions and evaluation criteria
- Proposed condition hydraulic modelling
- Evaluation of actions against criteria and development of conceptual alternatives
- Completion of conceptual alternatives
- Fish Use Survey
