

Update 4

7/19/2022

1. Please elaborate on Reporting Requirement question 30:

Can the proposed software provide the ability to resize portal objects independently?

ANSWER:

If you provide a dashboard, can you resize the objects on the screen independently. Objects on a dashboard are commonly called widgets. So the question could read, can you independently resize widgets on the dashboard.

2. It is our intent to quote the County's Environmental Health Department as "optional". Can the County provide the primary programs being managed by Environmental Health from a permitting, licensing and inspection perspective (example: Septic, Pools, Food Establishments, Solid Waste, Hazardous Materials, etc.) that should be considered as part of configuration for the optional proposal?

ANSWER:

There are several in-house Microsoft Access/ SQL Server databases used for EH Permitting.

- CTA – MS Access – Environmental Health Complaints DB
- Inspections – MS Access - Environmental Health inspections DB.
- EHPermitsBillingNET – SQL Server - Establishment ID is used in Inspections DB as a manual foreign key but the databases are not linked.
- Site Hazard Assessment (SHA) – SQL Server
- Water Systems DB – SQL Server
